FYI

Calbag is keeping MDEQ notified of their plans.

John

John

Per our conversation this morning, Calbag sent MDEQ the attached email.

Cory and Mike

The west rectifier has been removed opening the area where I will bring down clean fill from the borrow pit to build the ramps. Once the ramps are in, I will begin to remove the basement concrete, move it to the north side of the property for future removal of the rebar and crushing.

- 1) Email attachment where CFAC instructed Calbag to place the material for future rebar removal and crushing. Wells were located so we would not cover them or hit them.
- 2) Dirt ramp placement photo shows the floor that needs to be removed to make access for the dirt ramp. Ramp will run from about the excavator is sitting to the ledge you see in the picture.
- 3) Borrow pit material picture is the open cut mine located about ½ mile from the cell lines.

- 4) We processed some rebar out of the painted concrete from the West Rectifier. Sample picture of what the rebar will look like before it's sheared to mill size
- 5) Size concrete is what the material will look like after the rebar has been taken out. This material is also from the painted walls in the West Rectifier.

I would estimate we will start removing the basement concrete on or about June 12th. Please contact me if you have any questions,

Regards,

Cliff Boyd
